

Forward Physics at LHC Workshop

Forward Physics at LHC Workshop (May 27-28, 2010)

The workshop will be a forum of discussions on QCD phenomena at low x , diffraction, elastic scattering and total cross-section at hadron collider experiments, reviewing experimental results from present and past colliders, in order to collect and spread ideas on how to make the best use of data for a fruitful program of Forward Physics at the LHC. Four sessions of half-day each are foreseen, with review lectures that will introduce the discussions on the session subject.

Location: *La Biodola, Isola
d'Elba (Italy)*
